

LET'S PROTECT LIFE AND FREEDOM

We need to take protective action before it's too late

Happening now in Australia !

Did you know that the current roll out of the 5G network is a massive undertaking being coordinated around the world and pushed by the corporate elite? This will engulf the entire planet with over 100 thousand satellites, millions of telecommunication towers, small cells and billions of 5G connected devices flooding the world with invisible electro smog pollution in the form of wireless electromagnetic radiation known to pose an extreme risk of biological harm.

The 26GHz frequency band in Australia has been released and this will further increase exposure of wireless electromagnetic radiation at unprecedented levels with little to no concern for the safety and wellbeing of Australian citizens and the environment.

No5G Party
Protecting Life & Freedom

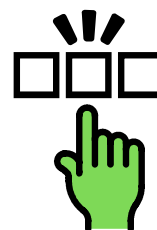

We are really about promoting safe technology and restricting unsafe technology

No5G Party policies include:

-  To promote legislative schemes, laws and policies to regulate 5G and associated technologies.
-  To establish a moratorium on 5G until such technologies are proven safe to human health, flora, fauna and property.
-  Encouraging and supporting the development of safe wired and wireless electromagnetic radiation emitting technologies.
-  Initiating the design and evaluation of the Australian Government's agency 'Infrastructure Australia', and utilising this infrastructure plan to advise governments, industry and the Australian community on the investments and reforms needed to deliver an environmentally sustainable national fibre optic cable telecommunications infrastructure to service all Australians.
-  To call for a parliamentary enquiry or Royal Commission investigating the Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) and the Australian Centre for Electromagnetic Bioeffects Research as to, among other listed concerns, why they fail to heed medical advice as to the risk of harm to the health of the Australian public.
-  Promote that smart devices and associated technologies are hardwired via fibre optic and Ethernet for schools, paediatric wards in hospitals and childcare facilities across Australia. Also we will promote a ban on wireless technology in the aforesaid until it is established by a unanimous consensus of all the State, Territory and Federal Chief Medical Officers that wireless technology poses no risk of harm to the health of children.
